IN THE SPECIFICATION

Please amend the specification as follows:

[0040] For example, the selected norm may be the formula derived by Hadlock et al. set forth above (10.35+(2.460*FL)+(0.170*(FL.sup.2))=Gestational Age (weeks) wherein FL is measured femur length expressed in cm). The norm would also have associated limits of the range of input values, i.e., a range of permitted input measurements, in this case from 0.64 cm to 8.0 cm) and would include its origin. The origin would specify the code value of the DCMR (DICOM Content Mapping Resource) or local coded concept, the coding scheme designator of the DCMR or local coded concept and the code meaning of the DCMR or local coded concept.
